

Coding Challenge 1

1

Coding Challenge 1 – A website to Manage Articles

- Create a Remix project with a page to add and list articles.
- The add articles form should have the following fields:
 - Title (mandatory)
 - Author (mandatory)
 - Body (Should handle large text content)
 - Publish Date (optional, set current date if none provided)
- The data can be saved to a local json file. Refer to the Remix code sample shared.
- Add adequate styling to your page.

Coding Challenge 2

2

Coding Challenge 2 – A website to Manage Articles using a Web service.

- Same functionality as Coding Challenge 1, but the data should be saved in API endpoint setup using json-server.
- One endpoint in json server: articles

Coding Challenge 3

3

Coding Challenge 3 – Articles Management website with Database.

- Same functionality as Coding Challenge 1, but the data should be saved into Sqlite database accessed using Prisma.
- One table in database: articles.
